SUMMARY

I am a highly motivated Software Engineer with around 4 years of experience in developing scalable e-commerce platforms, designing microservices architectures, and optimizing cloud-based deployments. With expertise in Java, Spring Boot, React, AWS, and SQL databases, I have successfully built high-performance applications, ensuring seamless integration, efficient deployment, and enhanced user experience. I am proficient in cloud infrastructure automation, CI/CD pipelines, and containerization with Docker, enabling smooth development workflows. My strong analytical skills and problem-solving mindset allow me to identify and resolve production issues, ensuring system reliability and performance. Passionate about innovation and continuous improvement, I thrive in agile environments and enjoy collaborating with cross-functional teams to deliver robust software solutions.

TECHNICAL SKILLS

Programming Languages:	Java, JavaScript, Python
Databases:	SQL
Web Technologies:	HTML5, CSS, Apache Tomcat 8.5, Tailwind CSS, React, Next.js, Node.js
Framework & Tools	Spring Frameworks(Spring Core, Spring MVC, Spring Rest, Spring Boot), Maven, Docker
Automation & Testing	Selenium, Junit, Postman, Swagger
Others:	Control-M, Git, Scrum, Service Management, Docker, Pandas, JIRA, NumPy, Microsoft Office, Excel, PowerPoint, Visual Studio Code, SharePoint
Skills:	API Integration, Troubleshooting
Development & Methodologies	Scrum, Service Management
Operating Systems:	Unix, Windows

WORK EXPERIENCE

Senior System Engineer | Infosys, Bengaluru, India

Aug 2022 – Nov 2023

- Developed a scalable e-commerce platform with a microservices architecture, leveraging AWS cloud infrastructure for seamless integration and efficient deployment.
- Engineered engaging and high-performance user interfaces using React, optimizing page load times by 9% through strategic code refactoring and Redux state management.
- Designed and implemented a robust microservices architecture in Java, enabling independent deployment and scalable RESTful API integration.
- Orchestrated cloud infrastructure on AWS with auto-scaling and CI/CD pipelines using Jenkins, reducing release cycles and improving development efficiency.
- Optimized database performance by implementing a highly available SQL solution, ensuring data integrity and responsiveness under high concurrency.
- Containerized microservices using Docker, enhancing deployment efficiency, scalability, and environment consistency.
- Identified and resolved production issues related to web applications and databases, ensuring compliance with SLAs.
- Worked closely with cross-functional teams to gather requirements, design solutions, and implement new features, participating in agile development processes and contributing to continuous improvement initiatives.
- Developed and executed automated test cases using Selenium and JUnit, ensuring robust regression testing and minimizing manual effort in the software development lifecycle.
- Performed API testing using Postman and Swagger, validating request/response flows, authentication mechanisms, and data consistency across microservices.

Software Engineer | SpiderWeb InfoTech Pvt Ltd, Mumbai, India

Feb 2021 – June 2022

- Engineered robust RESTful APIs using Java and Spring Boot, enabling seamless backend communication and enhancing data interaction for a dynamic user experience.
- Optimized structured data management using advanced SQL and MySQL techniques within AWS RDS, ensuring data integrity and efficient organization.
- Implemented comprehensive unit testing with JUnit, ensuring software reliability, scalability, and adherence to quality standards throughout development.
- Designed and deployed CI/CD pipelines leveraging Amazon EC2 for hosting, S3 for artifact storage, and RDS for database management, streamlining build, testing, and deployment.
- Developed secure user authentication, registration, and profile management using Spring Security, integrating AWS Cognito for enhanced security and user engagement.
- Integrated Java applications with the relation databases, writing and optimizing SQL queries, and ensuring data retrieval and manipulation.
- Managed ticketing systems to track and resolved application issues, analyzing incident trends, prioritizing tasks, and implementing permanent fixes to enhance system reliability.
